Week 2 – Status Report

I've had a lot of accomplishments this week. I learned more about JavaScript and how it is very distinctly different from C#, while still maintaining some similarities. Another accomplishment is the fact that I completed all of the reading assignments early and understood the material. Normally, I struggle with the comprehension of the different structures in programming languages, but reading the Head First Into JavaScript Programming made the language easier to understand.

My biggest challenge this week is determining what to do for the final project and how to create it. I have a few good ideas on what I want to create for my project, but I'm having difficulty on how I want to build it. Another challenge for me this week is proper time management. My job is currently experiencing an influx of customer issues and we are all required to put in overtime to catch up and meet service level agreements. This required overtime is making it difficult to focus on my assignments, since so much of my extra time is being devoted to work right now. However, even though I have a few challenges this week, I will overcome them and finish all of my assignments on time.

My major goal for this week is to make sure that all of my assignments are done by their due date. My ultimate goal is to have all of them completed ahead of time; before their due date, since my job is utilizing most of my free time this week. Another important goal this week is to start building my final project, so that it is properly created and ready for submission when it is due at the end of this course.
